

Selectric introduces our range of ATOM LED Bulkheads. All our LED bulkheads can be mounted on walls or ceilings to give ultimate versatility. Our fittings are designed with anti-glare diffusers that emit a full and even light beam. Some bulkheads also feature a hinged gear tray for fast installation.

Lighting environments can be personalized on ATOM PRO fittings by selecting from three colour temperatures and four wattages, offering a range of options to suit individual preferences and needs. This allows for flexibility in creating the desired ambience and functionality in any space. Whether it's a warm, cozy atmosphere or a bright, vibrant setting, users can easily customize their lighting experience to match their specific requirements.
